Overview

This is a console based ERP (Enterprise Resource Planning) System, which is built to make the process of running some parts of the company's actions easier, this includes, adding, removing and updating various information for companies, customers, products and sales.

Getting started

Download

The program is located on Github: https://github.com/jakoofficial/H1-ERP-System

The project
After going to the github link of the project, click on the green button with the text "**<> Code**" followed by "**Download ZIP**" and the download should start.

The program
While on the github you can download the **ERP-System.zip** either by clicking the file itself or by going in the **README.md** and **Release Build** link for **Build v.1.0**

Opening

When the program has finished downloading, unpack it using an unzipping program like **7-zip** or **Win-rar**.
When unpacked at your desired location, open the folder and double click the **H1-ERP-System.exe** to open and run the program.

Login

Upon starting the program, a login is required to use it.
The following credentials will allow access to the program:

Username: H1PD021123_Gruppe2
**Password**: H1PD021123_Gruppe2

Controls

The program does not require a mouse, but instead a keyboard for navigation.

The **up** and **down** arrow keys move the selection.
Enter to go to the chosen View.
**Escape** to go back to the Main menu.

How to

In this section, we will be referring to a company, customer, product or sale as an item, for easier reading, as the tutorials apply to all the above views.

Inside each view, you can **create**, **edit** or **delete** items.

Create

To create a new item, press **F1**.

After entering the creation screen, you can press the **up** and **down** arrow keys to move the selection box and press the **enter** key to start writing in the selected box.
When you are done writing in the selected box press the **enter** key to be able to navigate again.
Press **ESC** when all fields have been filled.

Edit

To edit an item, press **F2**.

When in the edit screen, you can press the **up** and **down** arrow keys to move the selection box, and press the **enter** key to start writing in the selected box and **enter** again when done writing the box and to be able to navigate again.
Press **ESC** when all fields have been filled.

Delete

To delete an item, press **F5**

When in the deletion screen the **up** and **down** arrow keys are used to select and pressing the **enter** key will select the highlighted option.

Known bugs

Creation 'exit' bug
After quitting the creation screen from any screen, it does not send you back to the previous screen correctly and is missing control information at the top of the screen.

Troubleshooting

Cause	Possible solution
Database not connecting	If possible, try to restart the database and/or check to make sure it is running.
Can't login	Check to see if the credentials were correctly written.
